

# PERMAVOID 85S CAPILLARY CYLINDER

Where the Permavoid units are very suitable for water storage and conveyance, the Capillary Cylinders are the key component in transporting water from the units back to soil and plants, or capillary irrigated layer on top. These cylinders

have been specifically designed for the purpose of capillary transport of water, with a capacity of each cylinder that outperforms even the highest plant evaporation rates many times over. The fibres will last a lifetime.
